MULTILINE E

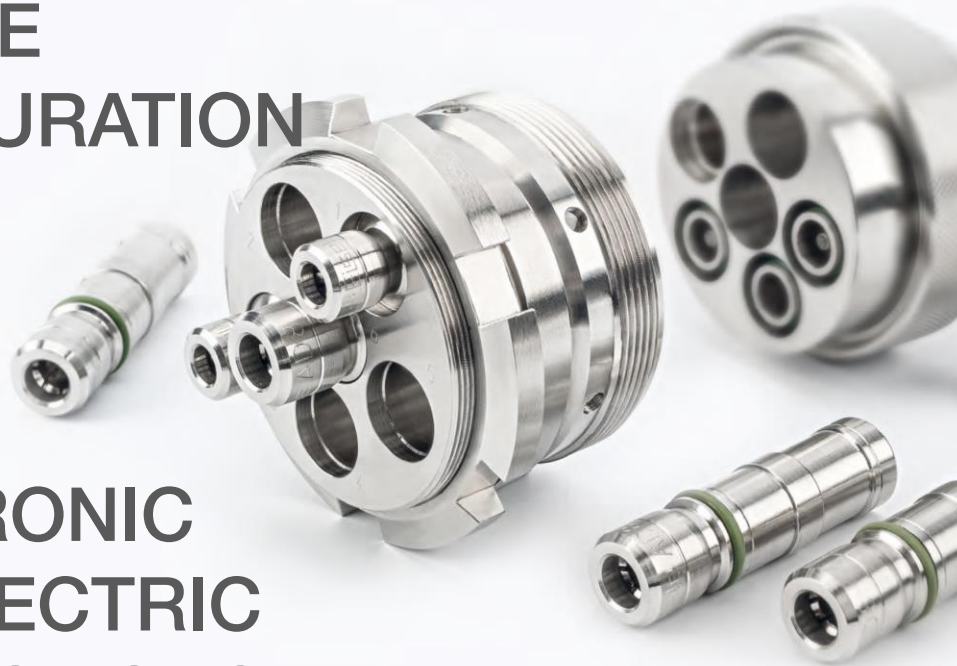

The modular connection system for
electrical and electronic connections

**MINIMISED SETUP
TIMES**

**FLEXIBLE
CONFIGURATION**

**ELECTRONIC
AND ELECTRIC
CONNECTIONS**

**For automation, plant
engineering and
control technology**

FLEXIBLE CONFIGURATION

MULTILINE E combines different interfaces.
The adaptive inserts can be equipped as needed
with M12 round connectors or other connector
types for bus systems, control technology and
power supply.
In addition, hose connections can be integrated.

MINIMISED SETUP TIMES

Diverse combinations of different connector types and media result in a genuine modular kit system. Later modifications or conversions of the modular system are easy to implement.

The replacement of entire functional groups or tools with a flick of the wrist minimises machine setup times.

ELECTRONIC AND ELECTRIC CONNECTIONS

The highly reliable multiple connector **MULTILINE E** combines multiple electrical or electronic connections.

The E-connector line with the widely used and standardised M12 round connectors is available in different versions: A-coding, Cube6, Profibus, Ethernet and three to twelve pins.

M12 POWER CONNECTOR

The M12 power connector in accordance with IEC 61076-2-111 is the smallest and most compact connector for cables with wires up to 2.5 mm². The adaptive insert with five power contacts supplies up to 16 A per pin. The power connector is protected against reverse polarity, vibrations and shock.

WORLD INNOVATION: MULTILINE E

- Fast, connection and disconnection without tools
- Frequent mounting and removal possible
- Individual pre-configured connection cable
- Minimum installation space
- Unproblematic combination with gases, pneumatics and fluids
- Best quality material, durable and robust
- Very high flexibility

Diversity of variants

High-quality workmanship

Saves time and space

EISELE quality

- 100 % Made in Germany
- Solid metal connections
- Durable and robust
- Maximum reliability

“From the design through to delivery and beyond we guarantee the premium quality of Eisele

products” Klaus Harsch, Design Engineer

CHECKLIST MULTILINE E

- Robust and durable
- Base body of stainless steel /
anodised aluminium
- Countless possible variations
- Easy installation and handling

CHECKLIST MULTILINE E

- Reduced machine setup times
- Flexible configuration
- Compact installation space
- Anti-twist and reverse polarity protection
